2. BLM Inventory Finds on Record:

Mixed ownership between BLM, State, and private. Almost all federal land is leased for oil and gas. Contains many oil and gas drilling operations, and producing fields. Many miles of fence, many reservoirs, improved springs, and wells. Permanent improvements and many miles of bladed roads preclude the area from possessing wilderness qualities. Other human activity includes hunting, livestock grazing, management activities. Several ROWs granted for oil and gas pipelines, powerlines; uranium claims in large portion of unit. Complex in vegetation and topography. Primary plant associations are sagebrush, salt brush, greasewood, and forest cover. Variable topography ranges from steep rugged hills and rims to flat/gently rolling bottom land. The 1979 unit evaluation for Wild Horse Basin WYO-030-408 concludes that the area “obviously and clearly does not have potential for wilderness.”
